Abstract of JP 9016491 (A)

PURPOSE: To improve the handleability and portability of an information terminal system utilizing radio communication. **CONSTITUTION:** This information terminal system is composed of the combination of a radio equipment 1, a personal computer 2 and an interface card 3. The radio equipment 1 receives and/or transmits radio waves to be the carrying medium of information, is provided with independent uses such as a portable telephone set and an FM radio, etc., at the time of being used alone and becomes subordinate to the personal computer 2 and functions as the communication unit of the information when it is used in combination. The interface card 3 integrates the radio equipment 1 and the personal computer 2 by mechanically directly connecting them, functions as an interface unit for electrically connecting the radio equipment 1 and the personal computer 2 and controls the transfer of the information between them.
